

ENVIRONMENTAL TALK

World Water Day 22 March 2025

World Water Day, held on 22 March every year since 1993, is an annual United Nations Observance focusing on the importance of freshwater. World Water Day **celebrates water and raises awareness of the 2.2 billion people living without access to safe water.** It is about taking action to tackle the global water crisis

Theme Glacier Prevention

What is a glacier?

A large slow-moving ice or snow moving down a slope

Global warming is causing glaciers to rapidly melt and retreat worldwide, leading to a significant loss of ice mass, contributing substantially to sea level rise, and disrupting water supplies in regions that rely on glacial meltwater for rivers and irrigation; this is considered one of the most visible and alarming impacts of climate change

How can we prevent glaciers?

- ✓ Get involved in local water management programmes or start one
- ✓ Support policies that reduce carbon emissions and adapt to shrinking glaciers
- ✓ Effective management of diesel and electrical usage
