## ASPASA WINTER SAFETY ALERT

|  |                                                                                                                                                    |                                                                                                                                                                                                                           |
|--|----------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | Early morning and late afternoon mist on the road restricting visibility                                                                           | Plan travel time where possible specifically delivery of products                                                                                                                                                         |
|  | Early morning and late afternoon sun rise and sunset times change<br>Plant and Pit in darkness when employees arrive or work 2 <sup>nd</sup> shift | Ensure the areas are well illuminated using Occupational Hygiene reports and results to guide you<br>Maintain all lights                                                                                                  |
|  | Dry grass is easy to burn due to open flames, spreading to neighbors and Plant and Pit areas<br><br>Some areas experience floods during winter     | Ensure fire breaks are in place<br>Employees are trained in basic firefighting including veldt fire management<br>Check all equipment related to emergency response<br><br>Storm water management and maintenance of such |
|  | Low temperatures causing our bodies to respond and react differently due to muscle stiffness                                                       | Do not underestimate a quick warm up before doing plant inspections<br>Check your footing, move slower and keep walkways clear of obstructions                                                                            |
